

Employee Management System (EMS)

Ama Mensah-Dwumfua

Overview

The Employee Management System (EMS) is a Java-based application designed to manage employee records and track attendance. It automatically stores and retrieves data using text files.

Key Features

- Add Employee – Save employee details
- View Employees – Display employee records
- Record Attendance – Track clock in/out
- View Attendance – Display attendance records

System Automation

The system automatically saves and retrieves data from text files, reducing manual tracking and improving efficiency.

System Requirements

- Java installed
- Runs in Command Prompt or Terminal
- No database required

System Flow

User	Java Program	Text Files
Input Data	Process Data	Store Data
