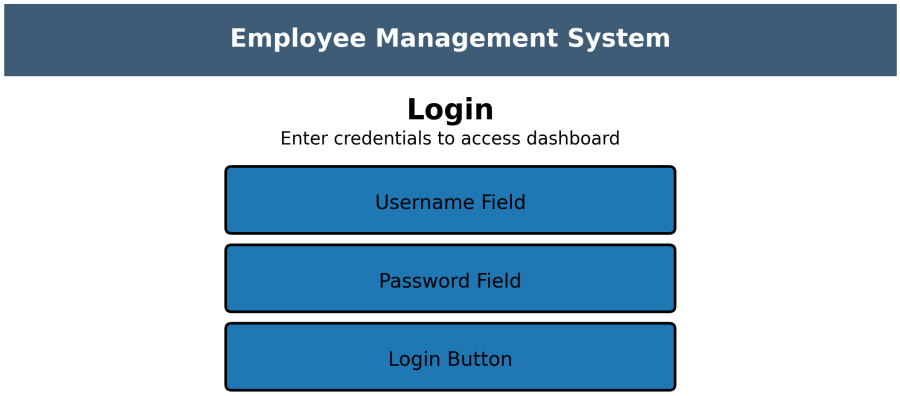
Employee Management System

User Interface Specification

This document shows the user interface design for the Employee Management System. The system uses a blue dashboard style. Each use case explains how the user moves through the system, what they click, and what they are able to see.

Use Case 1: Login

Navigation Path: Enter Username → Enter Password → Click Login → Dashboard



User Effort: 1 click, 15 keystrokes

Explanation: The user types in their username and password. If the information is correct, the dashboard opens. If it is wrong, the system will show an error message.

Use Case 2: Create Employee

Navigation: Dashboard → Click Create Employee → Enter Employee Information → Click Submit → Confirmation

User Effort: 2 clicks, 40 keystrokes

Explanation: The manager fills in all of the employee information such as name, department, and position they hold. All boxes are aligned inside the main area. After clicking Submit, the system saves the employee and shows confirmation.

Use Case 3: Record Attendance

Navigation: Dashboard → Click Record Attendance → Click Clock In/Out → Confirmation

User Effort: 1 click, 0 keystrokes

Explanation: The employee clicks Clock In or Clock Out. The system records the time and shows a message to confirm it worked.

Use Case 4: View Employee Details

Navigation: Dashboard → Click View Employees → Search/Select Employee → View Details

User Effort: 2 clicks, 0-10 keystrokes

Explanation: The manager searches for an employee and clicks on their name. The system shows their department and other details regarding the employee.

Use Case 5: Generate Attendance Report

Navigation: Dashboard → Click Reports → Select Date Range → Click Generate → View Report

User Effort: 2 clicks, 10 keystrokes

Explanation: The manager chooses a date range and clicks Generate. The system shows total hours and overtime. The report can also be exported if needed.

Novelty and Design Justification

The interface uses a consistent and calm a color scheme, it has a structured layout, and it is clear and makes it easy to navigate the paths so it is user friendly among all ages. Role-based dashboards improve usability. Being able to date pick and having tables make it real and easier to use. This design demonstrates originality beyond a basic form layout.
